# Key management questions

## I. RESUSCITATION AND STABILIZATION

- **1.** What are key considerations in the initial assessment and management of patients with mechanically unstable pelvic ring injuries?
- 2. When and how should REBOA (Resuscitative Endovascular Balloon Occlusion of the Aorta) be used in the acute management of major pelvic ring injuries?

## II. TEMPORARY PELVIC RING INJURY IMMOBILIZATION

- 3. How should the mechanically unstable fractured pelvis be immobilized initially?
- 4. What considerations guide the duration of use of pelvic binders?
- 5. What is the role of emergency department C-clamp application in the initial management of pelvic ring injuries?

## III. HEMORRHAGE CONTROL - ANGIOEMBOLIZATION

- 6. When should angioembolization be used in the acute management of major pelvic ring injuries?
- 7. When should selective versus non-selective angioembolization be used in acute management of blunt pelvic ring injury?

## IV. HEMORRHAGE CONTROL – PELVIC PACKING

- 8. When should peritoneal pelvic packing be employed for major pelvic ring injuries?
- 9. How and by whom should pre-peritoneal pelvic packing be performed?
- 10. Should pre-peritoneal pelvic packing be performed in a rural/remote or community setting?

## V. OPEN PELVIC RING INJURIES

- **11.** How should patients be assessed for the presence of open pelvic ring injury?
- 12. What are the indications for fecal diversion in the management of open pelvic ring injuries?

## VI. DIAGNOSTIC IMAGING

- **13.** How should patients presenting with proven or suspected major pelvic ring injuries be diagnostically imaged?
- **14.** When and how should patients with pelvic ring fracture undergo evaluation of the urethra and the bladder?

### VII. TRANSFER TO HIGHER LEVEL OF CARE

- **15.** What are the indications and timing for higher level of care (HLOC) transfer of a trauma patient with major pelvic trauma to a centre with orthopedic expertise in the surgical management of complex pelvic ring injuries?
- 16. What is the preferred process for inter-facility transfer of major pelvic ring injuries?
- **17.** Which patients with pelvic ring fractures can be managed in a centre with general orthopedic surgery?
- **18.** Which mechanically unstable pelvic ring injuries can be managed in a centre without orthopedic surgery?
- **19.** How should the orthopedic surgeon on-call in a community hospital be involved in the early management of the patients with pelvic ring injury?

### VIII. HOSPITAL CARE

**20.** What are the care requirements for acceptable management of the stabilized admitted patient with a major pelvic ring injury?

#### IX. DEFINITIVE SURGICAL CARE

- **21.** What is the preferred timeframe for definitive surgical fixation of major pelvic ring injury?
- **22.** How should bladder rupture (intraperitoneal and extraperitoneal) associated with major pelvic injuries be managed?

#### X. TRANSFER TO LOWER LEVEL OF CARE (REPATRIATION)

**23.** What are the indications and timing for repatriation back to a sending facility (or equivalent) of patients with major pelvic ring injury transferred to a regional centre with expertise for advanced orthopedic care?

#### **XI. REHABILITATION**

- 24. What is the preferred rehabilitation strategy for patients treated for major pelvic ring injury?
- **25.** When and how should patients who have undergone definitive surgical fixation of major pelvic ring injury be mobilized?
- **26.** What are the indications for in-patient rehabilitation of a patient treated for major pelvic ring injury?

#### XII. FOLLOW-UP

27. What is the recommended follow-up for a discharged patient with unstable pelvic ring injury?
